Controls

- For locking and opening controls for window and doors should not be more than 1400 mm from the finished floor usable by one hand.
- Switches for electric light and power as well as door handles and other fixtures and fittings should be between 900 mm - 1200 mm from finished floor.
- Power point for general purpose should be fixed between 400-500 mm from the finished floor. (as shown in the Figures-1,2)

Range of Reach

- A wheelchair user's movement pivots around his or her shoulders. Therefore, the range of reach is limited, approximately 630 mm for an adult male.
- While sitting in a wheelchair, the height of the eyes from the floor is about 1190 mm for an adult male. (as shown in Figure-3)

![Fig-3. Range of Reach](image)

A wheelchair has a footplate and leg rest attached in front of the seat. (The footplate extends about 350 mm in the front of the knee). The footplate may prevent a wheelchair from getting close enough to an object.

a. Manually operated equipment must be designed to be easily accessible from a wheelchair.
b. Make sure that the coin slots of vending machines etc. are located no higher than 1200 mm.
c. Allow a space at least 350 mm deep and 700 mm high under a counter, stand, etc (as shown in Figure-4).
